

Telco Customer Churn Analysis – Power BI

Project README | Customer Churn, Retention & Business Insights

Project Overview

An end-to-end Power BI project focused on analyzing customer churn, identifying high-risk customer segments, and generating actionable business insights across demographics, tenure, contracts, payment methods, and internet services.

Objectives

- Analyze overall customer churn and retention.
- Identify customer segments with higher churn.
- Understand churn patterns by contract type.
- Analyze churn across payment methods and internet services.
- Study customer tenure distribution.
- Provide actionable business recommendations.

Tools & Technologies

Tool	Purpose
Power BI	Dashboard & interactive visualizations
Power Query	Data cleaning & transformation
DAX	Measures & KPI calculations
CSV	Source / cleaned dataset

Key KPIs

- Total Customers
- Churned Customers
- Active Customers
- Churn Rate
- Average Tenure

Dashboard Pages

Page	Main Analysis
1. Customer Overview	KPIs, churn by gender, partner and dependents, and customer tenure distribution.
2. Churn Analysis	Churn by contract, payment method, and internet service.
3. Summary & Key Insights	Key findings, business recommendations, and overall conclusion.

Key Insights

- Overall customer churn rate is 26.54%.
- Month-to-month customers show higher churn.
- Electronic check users show higher churn.
- Fiber optic customers show higher churn.
- Customer tenure is an important factor in understanding churn.

Business Recommendations

- Target high-risk customers with retention offers.
- Encourage customers to move toward longer-term contracts.
- Investigate service-related issues among fiber optic customers.
- Promote convenient alternative payment methods.
- Strengthen onboarding and support for newer customers.
